

Express Access has evolved from a simple barcode card system to a complete photo Id system with signature capture and printing, to even a complete cardless system using Bio-Metric Equipment.

Benefits

Opens Gates/Doors/Turnstiles - Express has the ability to open Doors, Gates or Turnstiles. If the access entry point is controlled electronically, Express can open it.

Accommodates Multiple Entry Points - Express can control access to your facility, no matter how large or small. Express can control from 1 entry point to 32 different entry stations with just 1 PC.

Restricts Entry by both Time and Gate - Express can restrict who comes in which door and at what time. Entry doors can be controlled individually by time/day and membership type. Ex: Men's or Women's Locker Rooms, Executive Areas, etc.

Will Not Allow Multiple Scans - Express can prevent members' from scanning their card and then scanning it again to let someone else in. Express has a built in adjustable timer which, when activated, will limit double entry into the facility.

Built In Security - Express comes with Security. Various groups can be set up activating different functions within the program. Also multiple logins are allowed making generic logins possible.

Easy*Image Standard Feature - Express also includes a document imaging module. The images are automatically indexed to the person's file. Simply find the person and scan the documents. A person's application, contract, or even emergency contact information can be found instantly.

Easily Imports Data from Other Programs - Express has a built in import feature. Simply map out the data one time and then run the import again when necessary.

Will Print Pictures on Cards - If cards are being printed, with the additional purchase of a digital camera, Express will automatically link the picture with the member. No more manually cutting pictures and "gluing" it to the card or using a separate photo card system. Express can print cards on laser sheets (which can then be laminated) or on a PVC high-resolution printer. With Express, when the member swipes their card, their picture appears on the screen.

Captures Signatures - With an additional purchase of a signature capture board, signatures can be added to cards or even reports.

Reminds Members of Renewal - Express has an option which (when activated) will automatically remind a member it is time to renew their membership. The advanced notice is determined by the facility. Express can be programmed to begin notifying users 30, 60 or even 90 days before their membership expires.

Allows Access and Data Entry Simultaneously
Express can control access in the back ground while performing other functions. In addition, if Hand-Keys are purchased, the Hand-Keys will keep track of who accessed the system while the computer was "Off". Whenever Express is activated, the Hand-Keys will begin downloading the information of who came into the facility. This will guarantee accurate reporting and non-stop operation.

Allows Global Termination - Express can terminate all members whose termination or expiration date has passed. This will prevent them from gaining access into the facility.

Produces Reports - Express can produce several types of reports. From who has been in the facility to who has not been in the facility. A summary report is also available. This gives a total every 30 minutes of how many people gained access into the facility. Plus a custom report writer is also included. This allows the user to create what ever report is needed at that location.

Allows Multiple Ways to Print Cards -If cards are being issued, Express allows several ways to generate the cards. Cards can be printed using a standard laser printer or if color cards are wanted, an ink jet printer can be used. The cards can then be laminated. To print cards immediately, a PVC card printer can be used such as a Data Card or Fargo. This would eliminate the cards being laminated, plus the cards can be printed "On Demand".

Express has the flexibility of using Photo ID cards or completely eliminating cards and using a Hand Key
