

Visitor Management Solutions from Lexington Technology

Traditionally, visitors to a company have signed into a logbook by scribbling their name, company, who they are visiting and login time. This guest book log is then kept as a written document for history of visitors, when they visited and who they visited. If any questions arise regarding who a visitor was, where they came from or who they saw, countless hours are spent by the receptionist or security going line by line to recover an entry with hopes that all the data has been entered into the log.

With LEXID VMS, visitor registration is easy. Visitors scan their ID (business card or driver's license), all relevant information is captured in a database file, you can personalize your visitors badge with the visitors photograph (optional), the name of the person, persons or area being visited, the reason for the visit, and their arrival and departure times. Once the information is captured a visitors badge is produced. Reports are a then a click away, with the ability to set search criteria's

LEXID VMS is a Comprehensive Visitor Management System for your Lobby or Guard Station. It's Powerful, Flexible and Scalable design platform will fit your needs now and in the future.

Our Visitor Management System is designed with you in mind. Of course we offer standard badge templates, designs and styles, but we also give you the ability to customize your visitor badges to fit your specific needs. From the Data Entry Screen to selecting company logos to printing your badges, customization is at your finger tip. You can design multiple visitor badge templates based on attributes, *i.e.* day badges can be one color or style, contractors visiting your facility can have a different badge and visiting VIP's can have a different badge design. The number of badge templates, their design and styles are a function of how you wish to use your badges, not how we envisioned how you would use your badges.

Visitor badges can be produced in any color, from a standard monochrome (black) to full color. You can print on any media from paper to plastic with or without adhesive backing.

Easy to Implement

Multiple Locations

Secure Operation

Customized Reports

Know who is in your Facility at all times

Easy to Implement: The Visitor Management System you are considering is one of the most feature rich products on the market today. We have incorporated our years of experience in the Personalized Photo Identification marketplace, to bring you a system that although is an off-the-shelf package it can be configured to your own unique requirements. To start producing quality Visitor Badges there are few simple steps.

*Create your data model, this is where you data will be stored.
Design data entry screen, what data do you wish to capture
Design your templates, color style, shape, and appearance.*

Your Visitor Management System is now ready for use. That is all there is to it. From here you have options for data entry, you can scan a driver license or business card, import an existing database or start entering data as visitors arrive.

Visitor Badges can be configured in portrait or landscape or any combination. We are not just limited to temporary or adhesive backed badges. Our system is capable of producing badges for PVC cards from CR-80 to CR-100 and in any thickness. If you are using RFID cards we also have the capabilities to produce badge templates for these types of cards also. Your Visitor Management System could also be a back-up to your employee badging system.

Multiple Locations can be configured to accommodate your visitor flow. You can have an administrator main lobby location, a secondary visitor entrance or Guard Station. If your visitor checks in at one location they can be checked out at another location. The Visitor flow and check in check out locations is up to you.

Secure Operation is achieved with administration privileges to assign passwords, set expectation dates, restrict access to data configurations and template design and assign "View Only" users.

Customized Reports is easy with our crystal based report generator. We have a variety of standard reports which can be used or you can customize your reports. Reports can then be analyzed for Visitor frequency and other useful data.

Peripheral Devices of all types can be used in conjunction with your Visitor Management System. Our system has the capabilities to interface with a multitude of cameras, scanners, signature and fingerprint capture devices, barcode and magnetic stripe readers and printers.

Data Entry is fast and efficient using our automated sign in. You have the option of scanning driver Licenses, business cards, or manual entry, it is your choice.

Drop down boxes and radio buttons enhance the operation of your Visitor Management System.

Customize your data entry screen with background colors or images, font styles and colors.

Employee ID:	656548
First Name:	Ame
Last Name:	Anderson
Title:	Customer Service
Department:	Sales
Address:	9875 Tamak View
City:	Carson
State:	NV
Zip:	92345

Signature Captures can be automatically scanned or captured using a signature pad.

Photo Images are easily added to your Visitors badge in several ways. Options available to you are; automatic input via Driver License Scan, standard digital Camera capture or importing existing photos from a data base. Photos can then be printed onto your badge in full color or monochrome depending on your badge printer capabilities. You can also position the photograph anywhere on the badge you desire.

Access Control is accomplished with badge encoding. Our Visitor Management System allows you to use most standard industry Barcode symbols. You will also get the capabilities to encode badges for Magstripe readers to meet ISO Standards. Once you encode your badges you have the capabilities to track visitors throughout your facility.
